

# ***DELMARVA 2000™***

***Delmarva Smoke Absorber* removes irritants quickly, safely, and efficiently. Carbon filter absorbs up to 80% of the odors from the air.**

As with any smoke plume generated by the thermal destruction of tissue either laser or high frequency radio surgery and/or the use of soldering devices for electronic work, can result in head ache and eye irritation.

Although there have been no documented transmissions of infectious disease through surgical smoke, the potential of generating infectious viral fragments may exist.

Obviously, the frequency of surgery with these types of instruments would have a bearing on this potential hazard. If heavy use of these surgical devices is the norm (4 or 5 hours per day) then a smoke evacuation system is advisable.

Delmarva 2000 smoke absorber through the use of activated carbon filters helps to reduce these irritants substantially.

Item#: HFR-A-31

Item#: HFR-A-32

Smoke absorber comes with 2 filters. Recommend changing filter monthly. Replacements sold in packs of 2.
